The Top Five Apps for Customizing T-Shirts For most of

us, the prospect of creating a custom T-shirt from a digital photo can sound like a daunting task, but with a handful of excellent resources, you can make custom shirts in minutes. The techniques for customizing T-shirts are becoming easier all the time and many of the best apps for customizing T-shirts are focused on one area: printing the design onto the front of the shirt. We used to have to go to a professional T-shirt printing company to get our shirts customized, but now with the power of the smartphone, we can do it ourselves. And today, we're going to take a look at five of the best

tools for printing your very own custom T-shirt designs. T-shirt Designer The very first app on our list is T-shirt Designer. Although it's currently in beta, T-shirt Designer is an excellent tool for getting your designs printed on T-shirts. What's really impressive about T-shirt Designer is that it allows you to work in a similar fashion to Google Photos. That is, you can take a picture and the app will automatically create a custom template from that image. From there, you can drag and drop elements to the shirt. But if you're hoping that this app will allow you to use some sort of

image editing program to adjust your photo before you start adding it to your shirt, then you'll be disappointed. T-shirt Designer is more about creating a template than it is about editing your photos. If you're looking for a tool that allows you to use the most popular editing programs and then upload the final product to your own T-shirt store, T-shirt Designer isn't the best tool for you. In fact, we'd suggest looking at some of the other apps on this list instead. UPS Store T-Shirt Printing UPS Store T

#11. Skype for Windows Phone

AppStorm Skype for Windows Phone is a very popular messenger application, one that offers users the possibility to connect to Skype users right from the app. Since it can be a bit disorienting at first, I will try to give you a more in-depth review as we go through the features of this app. Please note that I had no idea what was going on for the first 30 minutes of

using the app, and it only happens to the more inexperienced users.

Installing the app Once you download and install Skype for Windows Phone, you will find out that this app installs a shortcut on your Start screen, which allows you to launch Skype in a single click. There is also an option to add Skype to your Home screen as well, but I think that it is kind of the same as having a shortcut on your Start screen. Also, the app will install a couple of shortcuts to popular places as well, so you can launch it from your taskbar, from the app screen or from any other location. User-friendly

interface The user-interface is quite simple and easy to understand. All that you have to do in order to connect to a Skype user is to tap the Skype icon that appears on the app screen, enter the users name or phone number and press the connect button. That's pretty much it - the app will automatically connect to the other user, but you can also use an optional chat window to do so. The app also allows you to set up various calling and texting options, as well as to define your Skype contacts, so you can easily make new Skype users by simply tapping their name. A quick way to search for Skype users I

think that the primary function of this app is to allow you to connect with other Skype users, but it seems that there is also a way to make new contacts from the Skype app itself, which is actually a quick way to search for users, both in your local area or worldwide. This feature allows you to press "Find my Skype contacts" from the Skype app menu and access the search menu, where you can then type in a user's phone number or name, and the search will be conducted in just a couple of seconds. Unfortunately, you can't do anything with the search results, as there is no way to connect to

the other person, but that is actually a very useful feature to have on Skype, as it allows you to use it even when you are offline. Compatible with most Windows Phone 8 devices The Skype app
